

## DNA = a Recipe for a Living Organism

\_\_\_\_\_ = are building blocks of larger molecules called \_\_\_\_\_.

\_\_\_\_\_ tells amino acids how to line up and form themselves into a perfect protein.

The genetic code of the following DNA sequence is \_\_\_\_\_.

DNA can be found in the \_\_\_\_\_.

Amino acids can be found in the \_\_\_\_\_.

A partial copy of the DNA is called \_\_\_\_\_. It leaves the nucleolus and enters the \_\_\_\_\_ where it is read and used as a guide to build proteins.
