1) ***Greenhouses and level of technification.***

The Netherlands greenhouses Tech-level is one of the bests of the world. The Netherlands invests a lot of money in researching, cultivating, and development of greenhouses for ornamental plants production, such as tulips. There is an immense number of greenhouses, belonging both to universities, researching centers and business.

2) ***Would you be interested in ChatterPlant ideas?***

The ideas that you propose about ChatterPlant could be are very interesting. The advantage that could suppose to The Netherlands greenhouses would be to controlling certain processes of the plant in order to put all the plants at the same time of its lifecycle. Thus, flower production would increase. As an example, making flowering all the plants at the same time, allowing to the greenhouse owner to optimize the recollection of the flowers, and their benefit.
