

# 6/15/17

Thursday, June 15, 2017 3:36 PM

Two vials received from Dr. Rowe/Dr. Chubiz. Allegedly, DNA ligase and Taq Polymerase.  
We left them two vials in the 32 degree room to grow overnight as there was no growth in the vials.

The expression vector JOE needs to be purified on 6/16/17 to send for sequencing.

The plasmid JOE was in overnight culture. We made a new overnight culture  
50 uL in 10 mL LB+Cam (15 uL)

Talk with Michelle about not having cjBlue or try to find a good new insert

We transformed Green Chromoprotein (well 2K, Plate 4) and Yellow chromoprotein (well 6K, Plate 4  
[http://parts.igem.org/Part:BBa\\_K1033910](http://parts.igem.org/Part:BBa_K1033910)) into DH5alpha and plated them.

On 6/16/17, overnight cultures of the colonies (hopefully as a result of plating today) will be made.
